

Debugging Makefiles with GNU remake

<https://github.com/rocky/remake>

(needs a new release so clone or fork repo)

Home page

<https://bashdb.sourceforge.net/remake/>

What is a Makefile?

<check that everyone knows>

What can this debugger do?

- Give Help
- Step through Makefile execution
- Print variables
- Set breakpoints
- Trace Makefile execution

Live Demos

- Help
- Simple Makefile
- Simple Makefile with error
- Targets of remake's Makefile
- q, libnfq, ... Makefiles
