

Cool stuff

July 2009

Command line fu: <http://www.commandlinefu.com/commands/browse/sort-by-votes>
tiny core 10MB distro.

xclip - copy stuff from the command line to your clipboard in X easily.

ksplICE from ksplICE.com allows you to install kernel updates without rebooting!

iftop (Bandwidth usage per machine) - <http://debaday.debian.net/2009/01/25/iftop-display-bandwidth-usage-on-an-interface-by-host/>

watch (watch programs for changes) - <http://debaday.debian.net/2008/12/21/watch-from-procps-execute-a-program-at-regular-intervals-and-show-the-output/>

ddclient (dyndns client.) - <http://debaday.debian.net/2008/09/28/ddclient-getting-access-to-home-servers-despite-having-a-dynamic-ip/>

smoothwall - firewall

ipcop

DevTodo (looks at todo's in code) - <http://debaday.debian.net/2008/08/31/devtodo-a-remindertask-program-aimed-at-developers>

On ubuntu you can type 'apt:gkrellm' for example into firefox's address bar and it will install gkrellm for you. This maybe handy if you want to include a few links on you website and you want people to be able to install those things.

Printing to PDF from any app in Ubuntu

Simply install 'cups-pdf' and all your printouts will go to ~/PDF when you select the pdf printer.

can change dir but a problem.

cups-pdf.conf. have to put a numeric suffix so you don't overwrite you files.
